CALOTEX

What does Calotex Do ?

WE MANUFACTURE BOTH SERIES SOLUTIONS AND INDIVIDUAL ITEMS IN HIGH INDUSTRIAL QUALITY

Quality creates safety – this awareness unites all our employees.
For this reason, our company manufactures high-quality, durable and reliable products.

We are constantly developing new, individual heating solutions, taking into account national and international standards and certification criteria.
We work with a quality management system in accordance with DIN EN ISO 9001 and are certified for the manufacture of ATEX and UL products.

Our customers can therefore rely on the fact that materials, processes and products meet the highest standards.

We have also been audited and certified by demanding customers from the gas analysis and semiconductor industries.

Facts and figures

CALOTEX Sarl, established in 2014 and based in Nabeul, Tunisia, specializes in the development and manufacturing of flexible heaters designed for a wide range of industrial applications. With a commitment to quality and innovation, CALOTEX provides efficient and reliable heating solutions that meet the specific needs of its global clientele.

Administration

The link between finance and our workforce

The administration ensures the smooth management of resources across all levels of the company.

This department oversees budgeting, financial planning and monitoring costs, with a direct link to the workers on the ground.
By managing financial resources efficiently, they support every department from production to personnel ensuring that the needs of the workforce and operations are met without compromising financial stability.

Technical Director

Leading the way in manufacturing

The technical direction is the cornerstone of our manufacturing operations.

As the head of all technical and production activities, this department oversees every aspect of the process, ensuring that everything runs efficiently and according to the highest standards.
With their leadership, the team coordinates between different departments, aligning strategies with execution and driving innovation and quality across the entire manufacturing process.

CALOTEX

Technical office heating jackets

Engineering design and development

Design and quality assurance is at the core of the technical offices, our mission to deliver safe and reliable products.

The team conducts rigorous testing and inspection protocols to verify that every product meets or exceeds regulatory standards and internal quality benchmarks.
This includes compliance with local and international certifications, safety regulations and environmental guidelines.
In close collaboration with regulatory bodies, the technical experts oversee the certification process, ensuring that all products undergo thorough validation before release.
Their commitment to quality fosters customer confidence and reinforces our reputation as a leader in our industry.

These heating jackets are built for **efficiency, safety and durability**, perfectly adapted to fit complex components. Thanks to our expertise, we can design and deliver complete sets that ensure reliable protection, easy installation and long-lasting performance for industrial needs.

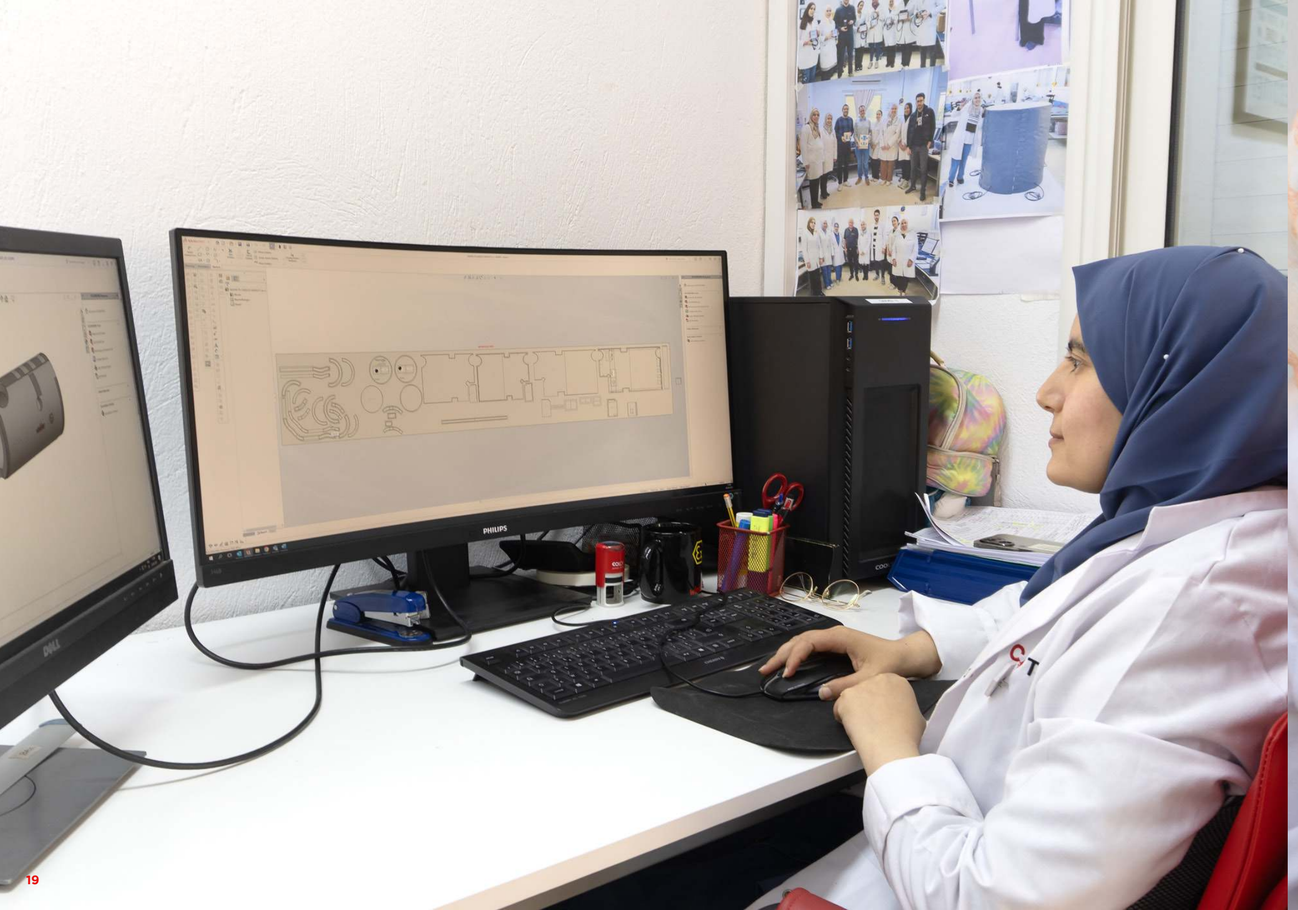

Technical office ATEX

Engineering solutions for safe and certified ATEX products

The technical office ATEX specializes in the design and certification of explosion-proof heating systems.
With deep expertise in ATEX standards, the team ensures all products meet the highest safety and compliance requirements. From initial design to final validation, they work closely with clients and regulatory bodies to deliver reliable solutions for hazardous environments.

Technical office

Coordination and engineering support for tailored heating solutions

The Technical offices bring together multidisciplinary expertise to support the development and customization of industrial heating systems.
From mechanical design to thermal calculations and product optimization, the team plays a central role in transforming client needs into technical solutions.
close collaboration between departments ensures fluid project execution and innovation at every stage.

Technical office heated hoses

Advanced development and engineering for complex projects

The technical office focuses on the development of advanced and highly customized solutions for heated hoses and heated lines.
The team handles engineering, prototyping and the integration of electronic and mechanical components to ensure precise temperature control.
Their deep technical know-how and cross-functional collaboration enable efficient, reliable and innovative solutions adapted to the most demanding industrial needs.

Technical office silicone heaters

Product management from development to delivery

The technical office silicone heaters oversees the development and production of silicone-based heating products.
They coordinate with design, manufacturing and supply teams to ensure quality and meet customer needs efficiently.

CALOTEX

We combine technical expertise with skilled hands to create high-performance silicone heating elements.
With strict attention to detail and quality, our team ensures each product meets the highest industry standards for safety, durability and functionality.

CALOTEX

Order Management

Behind the scenes of supply and demand

Our order management team ensures smooth operations from start to finish by working closely with both manufacturing and stock teams,
they expertly manage the supply of the materials, ensuring everything needed for production is available and delivered on time.

CALOTEX

The Factory

A closer look at our manufacturing zone

At the core of our operations, the manufacturing department expertly converts essential materials into high-quality products with precision and efficiency.
By optimizing production processes, they consistently meet deadlines while upholding the highest standards of quality.

CALOTEX

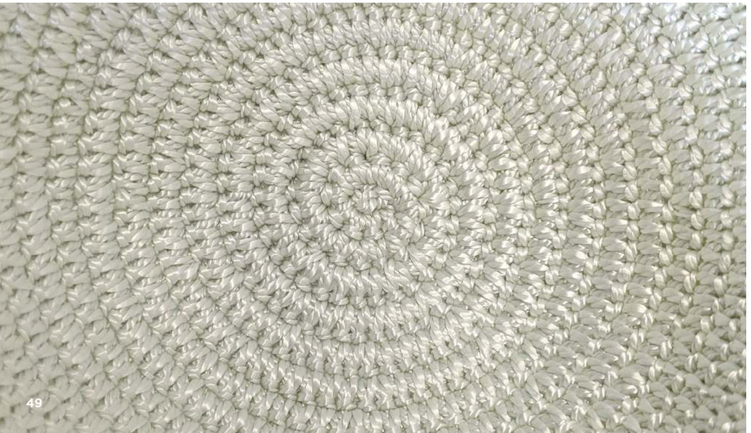

Here, every component is made by hand using high-temperature materials, applied with technical know-how and attention to detail.

The process not only enhances thermal protection but also ensures the safety, reliability and consistency required for industrial and laboratory environments.

Crafting with care and accuracy from designing templates to fabric cutting, every step is handled with precision and expertise.
Our dedicated team ensures each component is prepared with care, guaranteeing the high standards our thermal products are known for.

Every movement is intentional and every stitch matters.

With a deep understanding of technical textiles, the team brings together expertise and care to create complex assemblies.

Their precise handwork, steady focus and attention to the finest details ensure the reliability and quality of each finished piece.

Through skilled manual work and great attention to detail, a variety of materials are carefully prepared, assembled and shaped. This process ensures each piece is adapted to meet the specific technical and dimensional requirements of the final application.

Our production process ensures a perfect balance between **exceptional quality and high-volume output.**

Each unit is carefully crafted with precision and consistency guaranteeing long-lasting performance.

While our capacity allows us to meet large-scale demands efficiently and on time.

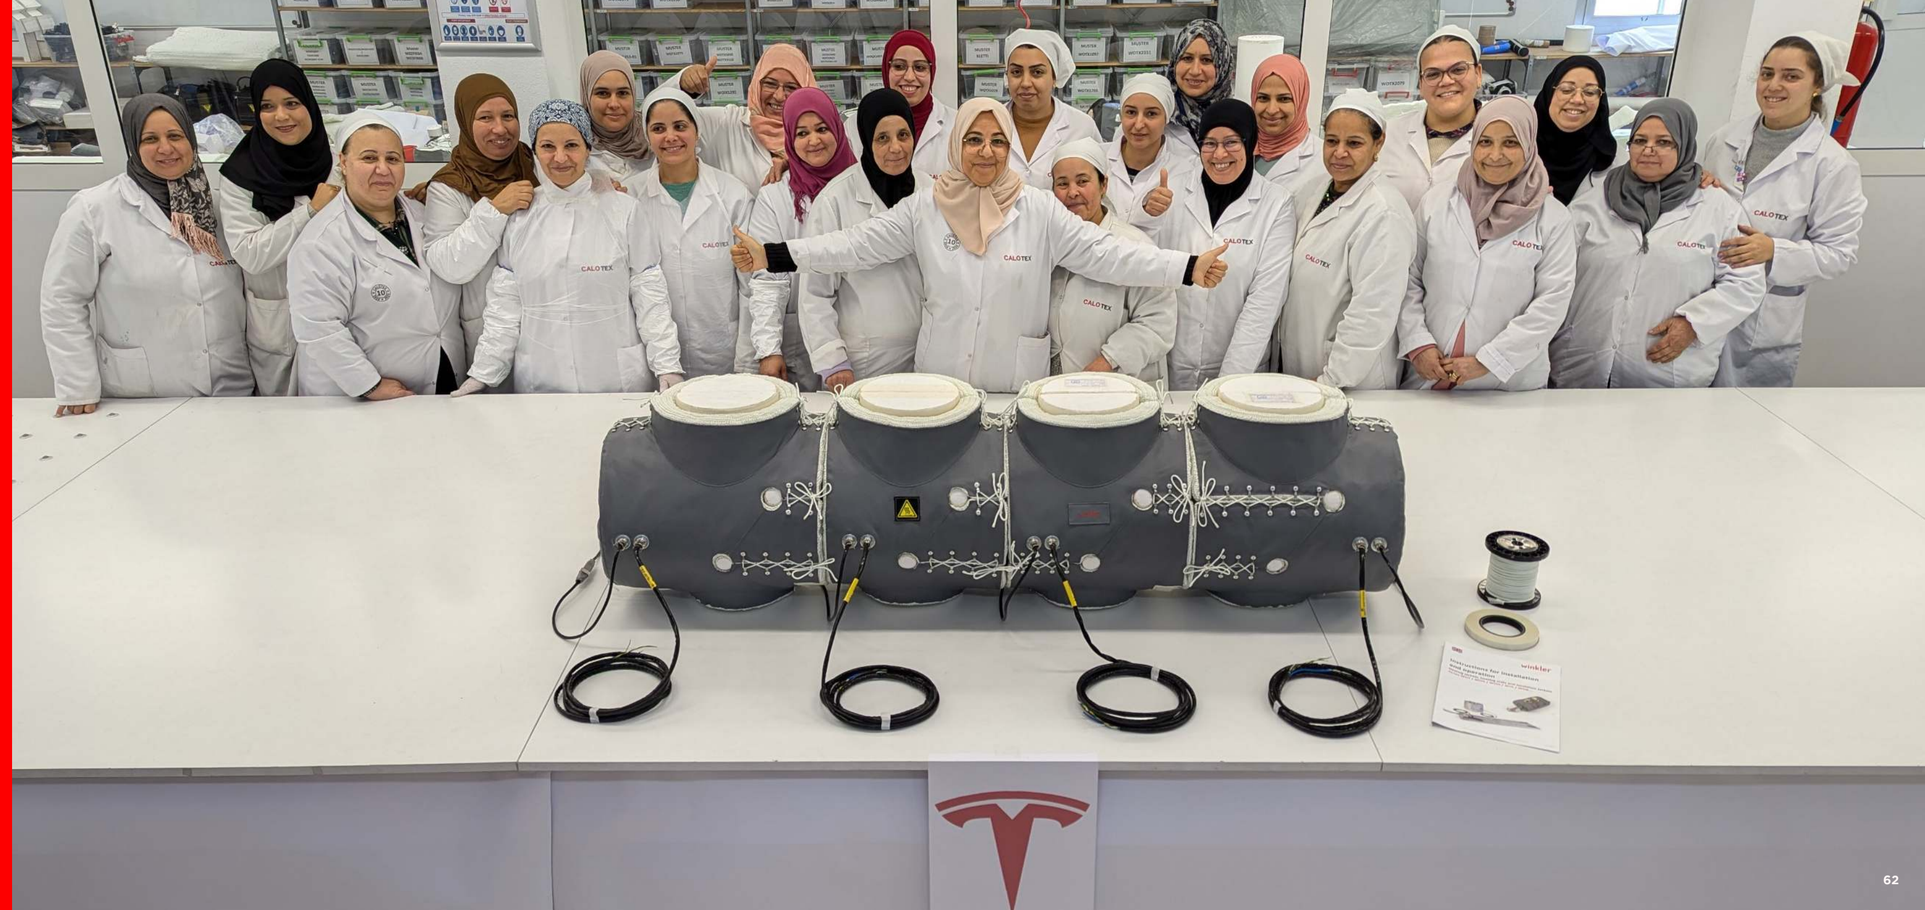

In the connection stage, our specialists ensure that every cable and terminal is perfectly assembled.
With attention to electrical safety and performance, we guarantee solid, dependable connections that power our thermal solutions with confidence.

Our skilled and passionate team stands at the heart of our success, bringing expertise, precision and dedication to every project.

Their commitment to quality and innovation ensures that we consistently deliver reliable solutions for world-class industries, embodying our values of excellence and continuous progress.

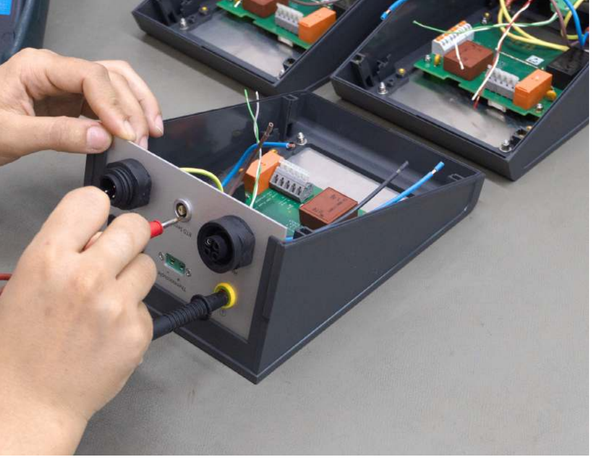

A wide range of specialized machines is used to guarantee precise labeling, transfer printing, and product marking, ensuring clear and consistent identification.

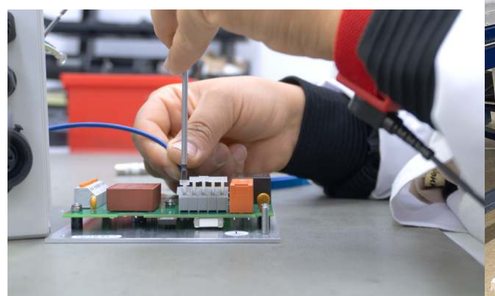

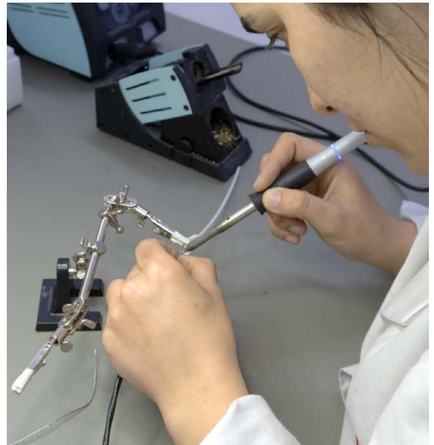

With steady hands and sharp focus, every connection is made to ensure perfect temperature control because every detail matters.

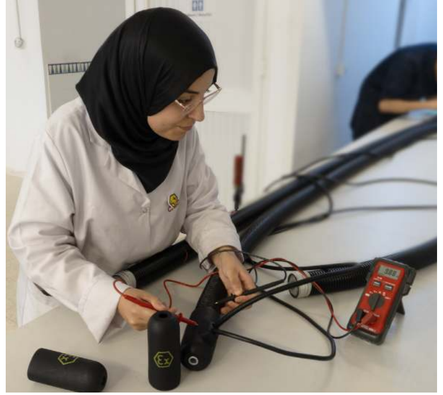

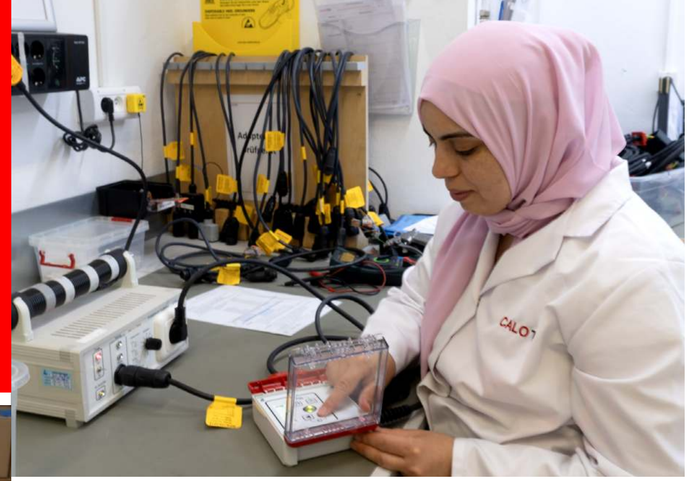

Each unit undergoes through inspection, functional testing and compliance checks according to internal standards and client specifications.

This meticulous process ensures that only products meeting the highest quality requirements leave the factory.

Laboratory products

Behind every reliable heating mantle

In the heating mantles sector, our team plays a key role in managing production and technical operations.
It ensures smooth, high-quality processes.

From assembly to quality control, our team ensures each heating mantle and thermal product is made with precision and care. With a focus on performance and reliability, we deliver high-quality solutions tailored to meet diverse industrial and laboratory needs.

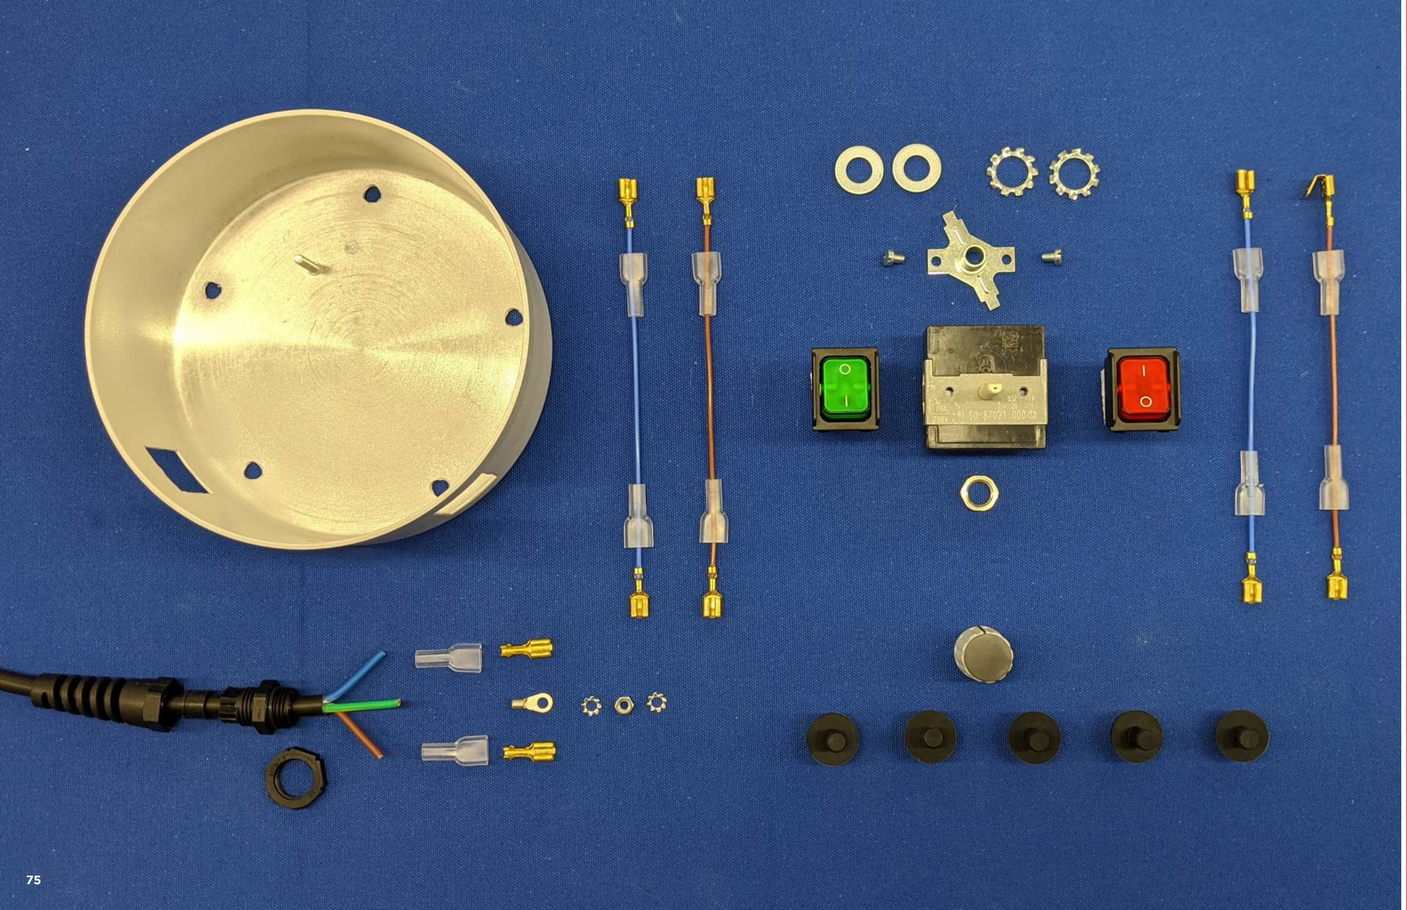

This set of high-quality components is designed for reliable electrical assembly, ensuring durability, safety, and ease of installation.

Each part is precisely engineered to fit seamlessly, offering a complete solution for building or repairing electrical systems.

Perfect for both professional and industrial applications, this kit guarantees efficiency and long-lasting performance.

Production management heated hoses

Managing every step: production team

The production management is essential in organizing each phase of the manufacturing process especially for heated hoses production.

They manage the movement of materials, track progress and ensure every step is carried out smoothly and on time.
Through effective communication with suppliers and production teams, they help maintain consistent operations and deliver heating cable products that meet quality expectations.

CALOTEX

Every operation in this section reflects a careful balance of craftsmanship and technique.
Whether measuring, winding or gluing components, our technicians ensure accuracy and quality at every stage to meet strict industrial standards.

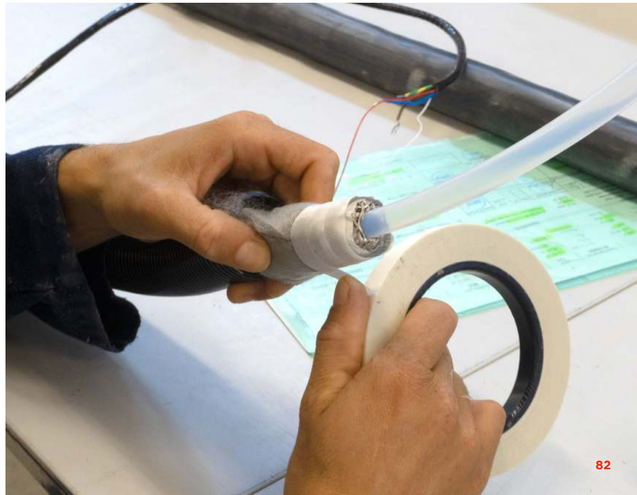

Guided by experience and passion for innovation, Calotex transforms ideas into high-performance solutions. This image captures our dedication to engineering excellence and our drive to meet the most demanding industrial challenges with reliability and confidence.

Precision begins long before the final product takes shape. In this part of the process each movement whether it's measuring, winding or gluing follows a deliberate and thoughtful approach.
With a refined sense of care and consistency, the work is carried out to ensure every detail aligns with demanding industrial standards. There's a quiet strength in this dedication, where expertise and a delicate touch come together to deliver lasting quality.

Pattern making

How industrialisation supports production

Powering progress behind the scenes, the pattern making department ensures smooth transitions from design to manufacturing.
They create and validate product models using 3D printers and other materials to guarantee accuracy before production.

CALOTEX

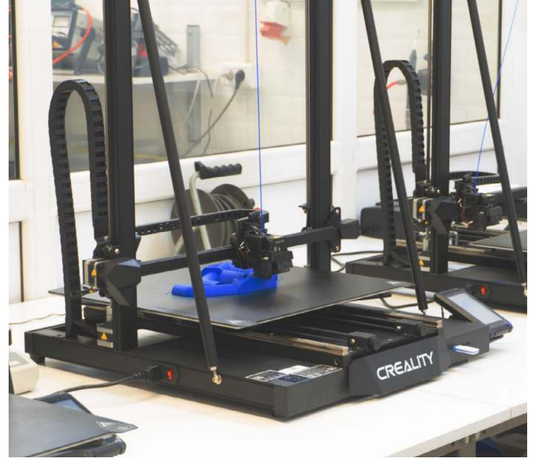

From small-scale components to large industrial assemblies, our range is designed to meet diverse technical demands.

With hundreds of models and configurations, our catalog is as dynamic as the industries we serve.

Whether you need something simple or something special chances are, we've already built it.

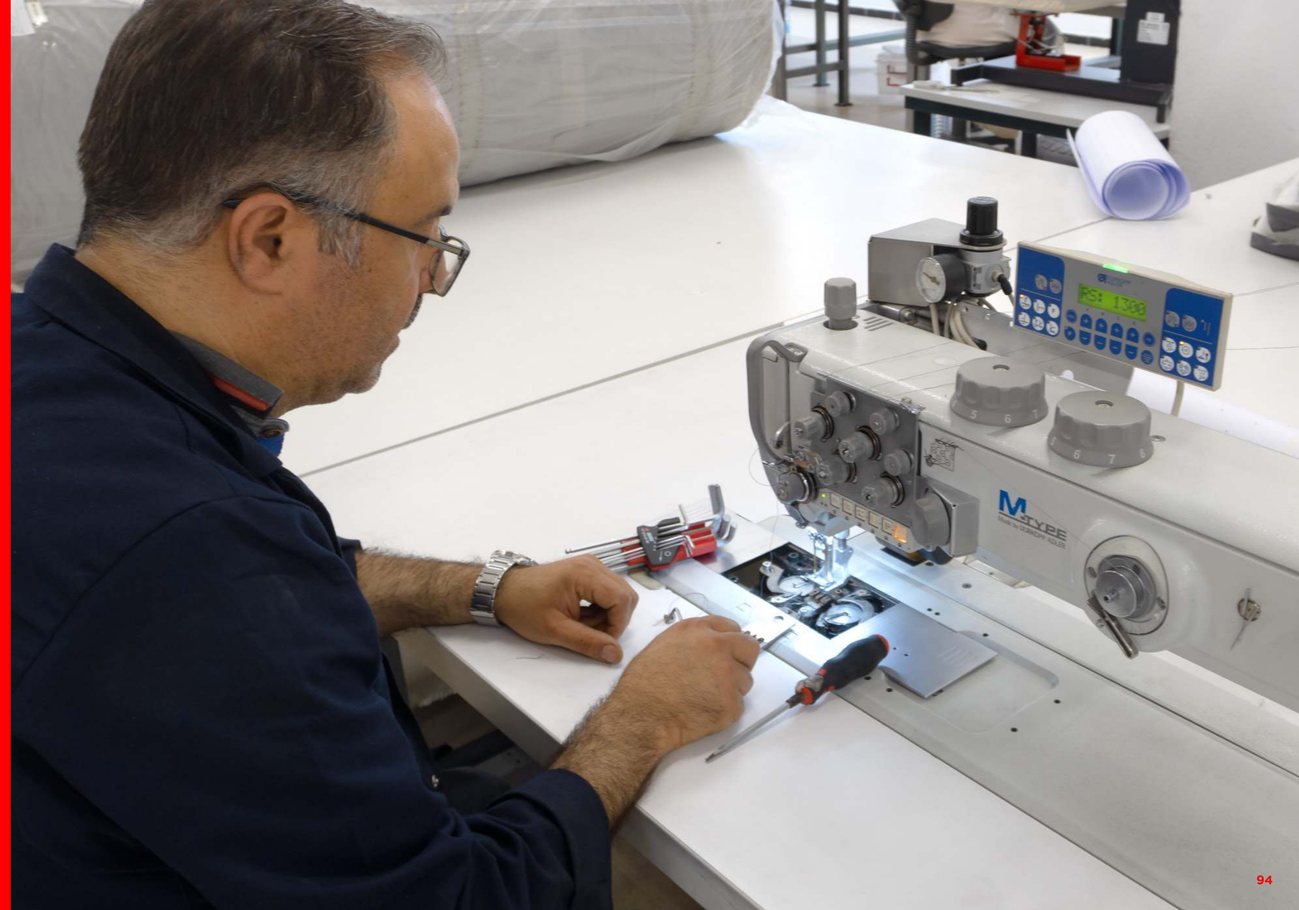

Technical services manager

Ensuring uptime, every time

The maintenance technician helps keep operations running smoothly, takes care of machines and equipment by fixing problems and doing regular checks.
By making sure everything works well, they help avoid delays and keep production efficient and on track.

CALOTEX

Quality safety environment management

QSE: Supporting safe and sustainable operations

The Quality, Safety and Environment Management department is central to maintaining high standards across the company.
They oversee product quality, ensure compliance with safety protocols, and encourage environmentally responsible practices.
Through routine inspections, staff training and continuous improvement, they help foster a safe, efficient and sustainable work environment.

Celebrating a Decade of Innovation and Excellence

In 2024, Calotex proudly marked its 10th anniversary a milestone that represents not only ten years of innovation and growth but also a decade of teamwork, dedication, and shared success. Since its founding, Calotex has built a strong reputation for delivering reliable, high-quality thermal solutions to clients across the world. This anniversary was an opportunity to celebrate how far we have come and to honour the people who made it possible.

The event brought together our management, technical teams, administrative staff, and partners, creating a moment of unity and pride. Smiles, memories, and achievements filled the atmosphere as colleagues reflected on the journey that shaped Calotex into the company it is today.
Every department from engineering and production to logistics and quality management played a vital role in this story of continuous improvement and collaboration.

This celebration also looked forward to the future. As we step into our next decade, Calotex remains committed to the same values that have guided us since the beginning: quality, safety, innovation, and respect for people. Our anniversary reminded us that while technology defines what we do, it is our people who define who we are. Together, we will continue to grow, evolve, and set new standards of excellence in the field of thermal engineering.
